

# CS 6210: Advanced Operating Systems

## Submission Practice Document

---

- Project is uploaded only through Canvas website <https://canvas.gatech.edu>
- **No emails for submission will be accepted.**
- If there is an issue with the submission drop an email before the deadline with the description of what the issue is and attach the screenshot about the same. This will help us in addressing the issue quickly.
- The following naming format should be followed
  1. Report name: project\_<i>\_report\_<gt\_handler>.pdf  
**Example : project\_1\_report\_gburdell3.pdf**
  2. Add the code and report in one single folder and make a tar to upload it on the canvas. The tar file name should be: project\_<i>\_<gt\_handler>.tar.gz  
**Example: project\_1\_gburdell3.tar.gz**
    - i = project number 1,2,3 or 4
    - gt\_id = gburdell3

You can tar and gzip your submission in one step using the command:

```
> tar czvf project_<i>_<gt_handler>.tar.gz [list of files/directories to compress]
```

If you want to verify the files included in your tarball, you may use the command:

```
> tar tzvf project_<i>_<gt_handler>.tar.gz
```

- **Submission code must have a “Makefile” for your sources.** We will only check the assignments for which the “Makefile” exists **and compiles everything**. We will be following this for all the projects throughout the course. Run “make clean” before submitting the code.
